

Hamilton's sorting and organizing systems provide easy access and retrieval for all document handling requirements.

Forms Management, Literature Fulfillment and Branch Mail Consolidation

Our Free Standing Modules for storing literature and forms, or consolidating branch mail are designed to clearly organize and identify actively used printed materials in a highly space-efficient footprint.

Literature fulfillment and branch mail consolidation are functions that are efficiently performed by Hamilton's modular component system. Design flexibility allows maximum space utilization while enhancing workflow and productivity. Sorting shelves, available in a range of sizes and individually adjustable in 1" increments, eliminate the wasted storage space that uneven literature or mail quantities can create.

All shelves have oversized, easy-to-read, full-width labels, color-coded for filing efficiency. Units are available in a range of height and width configurations that include features like cabinet bases, lockable security doors and slide-out worksurfaces.
